

Knowledge Base: Fixes and workarounds For Excel for Mac

## Excel for Mac

---

*Word/Excel does not respond when using "Save as Picture"*

---

### **ISSUE**

Word and Excel do not respond when you right-click an object or image and select Save as Picture.

### **STATUS: FIXED**

This issue has been fixed in version 16.33

---

*Excel prompts you to grant access to files and then hangs or shows a warning that it cannot open the .xlsx file because the format or extension is not valid*

---

### **ISSUE**

You may receive an unexpected prompt to Grant Access to files when you try to open a file or do "Save as..." or "Save a copy". When this happens, Excel may become unresponsive and you will need to force quit the application to recover.

### **STATUS: FIXED**

This issue has been fixed with version 16.34. Please update to this version or newer to address this issue. For help installing the latest Office updates, please visit [Install Office updates](#).

---

*"Variable uses an Automation type not supported" error in Visual Basic editor in Excel for Mac*

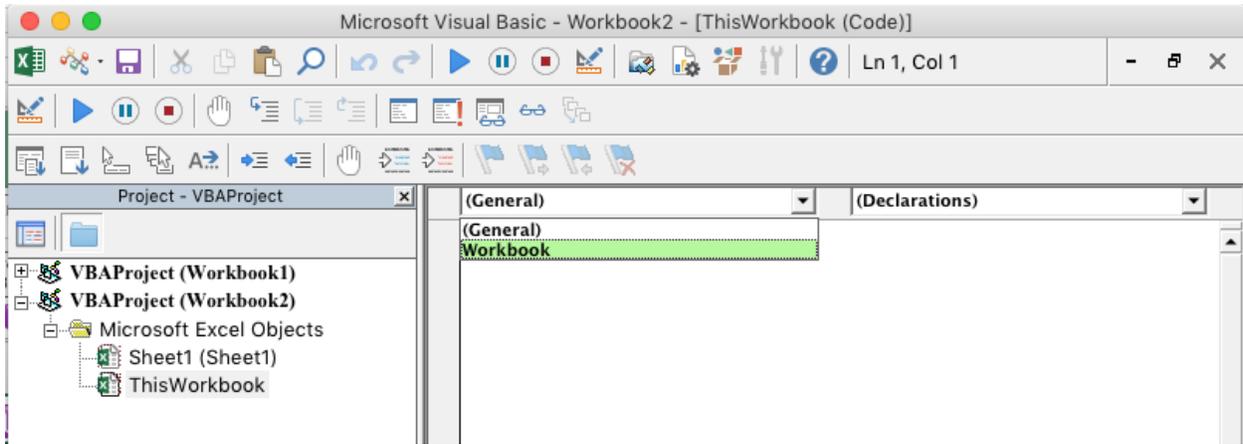

---

### **ISSUE**

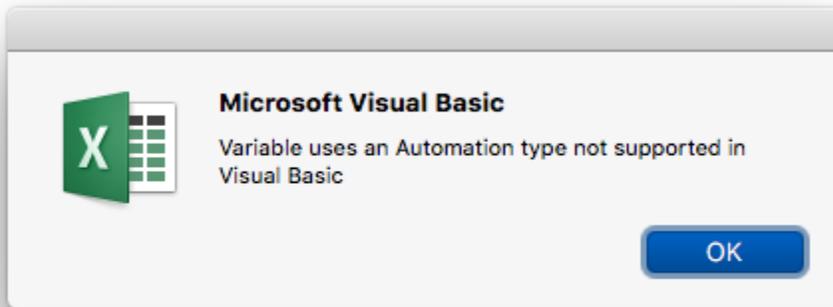

In Excel for Mac, a new Visual Basic Editor was introduced in October 2017. With this new VB editor, there's an issue with creating object declarations by choosing from the drop-down menu at the top of the code window.

If you click the drop-down on the left and choose an item from the list, you should get some code for the selected event in the drop-down list on the right. You can make additional

Knowledge Base: Fixes and workarounds For Excel for Mac  
selections from the drop-down list on the right to create additional code to handle the chosen event.

Instead, an error occurs that the code is not created.

**STATUS: WORKAROUND**

Choose one of these workarounds for this issue:

WORKAROUND #1

You can perform the similar step on a computer running Excel for Windows and then copy the code to Excel for Mac.

WORKAROUND #2

You can go to MSDN and find the syntax for the event you wish to use and type the code manually into your VBA project. This article describes the Microsoft Excel "workbook" events - [Workbook Events](#).

WORKAROUND #3

Knowledge Base: Fixes and workarounds For Excel for Mac

Copy the appropriate event code from the samples below and paste it to your VBA project. For each event, be sure to copy from "Private Sub..." to "End Sub", inclusive.

### **ThisWorkbook**

```
Private Sub Workbook_Activate()  
End Sub
```

```
Private Sub Workbook_AddinInstall()  
End Sub
```

```
Private Sub Workbook_AddinUninstall()  
End Sub
```

```
Private Sub Workbook_AfterRemoteChange()  
End Sub
```

```
Private Sub Workbook_AfterSave(ByVal Success As Boolean)  
End Sub
```

```
Private Sub Workbook_BeforeClose(Cancel As Boolean)  
End Sub
```

```
Private Sub Workbook_BeforePrint(Cancel As Boolean)  
End Sub
```

```
Private Sub Workbook_BeforeRemoteChange()  
End Sub
```

```
Private Sub Workbook_BeforeSave(ByVal SaveAsUI As Boolean, Cancel As Boolean)  
End Sub
```

```
Private Sub Workbook_Deactivate()  
End Sub
```

```
Private Sub Workbook_NewChart(ByVal Ch As Chart)  
End Sub
```

```
Private Sub Workbook_NewSheet(ByVal Sh As Object)  
End Sub
```

```
Private Sub Workbook_Open()  
End Sub
```

```
Private Sub Workbook_PivotTableCloseConnection(ByVal Target As PivotTable)  
End Sub
```

```
Private Sub Workbook_PivotTableOpenConnection(ByVal Target As PivotTable)  
End Sub
```

*Can't export a SharePoint list to Excel for Mac*

---

**ISSUE**

When you click Export to Excel to export a SharePoint list on a Mac, it doesn't open the file in Excel for Mac and instead downloads the query.iqy file. This is working as expected as the internet query connection is not supported by Excel for Mac.

**WORKAROUND**

If you have Excel for Windows, you can save the file as XLSX and then open it in Excel for Mac. You'll be able to see the data but you won't be able to refresh the data connection.
